THE EPS DIFFERENCE

CUSTOM DESIGNED

Work with our experts to custom design what fits your needs. The team at EPS can assist you in getting it just right.

ENERGY LOK

EPS Energy-Lok Panels are constructed from Expanded or Extruded Polystyrene Insulation with thickness to meet your cold storage needs.

COST EFFECTIVE SOLUTIONS

EPS Energy-Lok Panels can be used for a variety of projects from small walk-in cooler/freezers to covering the interior or exterior of large warehouses.

MULTIPLE FINISH OPTIONS

EPS Energy-Lok Panels can be produced in a variety of finishes: embossed steel, embossed aluminum, embossed stainless steel, embossed Fiber Reinforced Plastic, or liner steel.

TUFFY

The "Tuffy" product line, exclusive from EPS, delivers a self-contained, all-in-one cold storage solution designed for maximum efficiency and simplified installation. By eliminating the need for structural steel frameworks and secondary cooler or freezer liner packages, Tuffy buildings streamline the construction process. Each building package is an engineered structure that meets a wide range of cold storage needs, offering significant savings in both time and upfront costs.

PROVEN STRONGER

Tuffy SIPs have demonstrated superior strength compared to traditional stick-built construction.

INTERIOR FINISHES

EPS offers interior finishes: embossed aluminum, smooth or embossed Fiber Reinforced Plastic.

EXTERIOR FINISHES

The exterior of your Tuffy building can be finished to resemble a conventional framed structure.

DESIGNED FOR PERFORMANCE

EPS Tuffy building packages are engineered for strength, durability, and tailored to meet the specific needs of your business.
